PROFILE

Final-year ICT Application Development student aiming to gain hands-on experience in professional software and system development. Experienced in delivering projects through academic coursework that showcase problem-solving, analytical thinking, and attention to detail.

Currently expanding knowledge of development practices and workflows. Eager to bring a disciplined, production-focused mindset and a drive to create reliable and efficient solution to a professional development team.

PROJECTS

Student Enrollment System(Java, MySQL)

- Developed a system to manage student registrations, course enrollments, and record keeping.
- Implemented CRUD operations for students, courses, and enrollment records with database integration.
- Focused on object-oriented design principles and reliable data management to simulate a real-world administrative system.

Mbono Pest and Hygiene Website(HTML, CSS, JavaScript)

- Designed and built a responsive website for a local pest control and hygiene business.
- Implemented interactive UI elements, service listings, and contact forms to improve user experience.
- Applied clean code, semantic HTML, and responsive web design best practices.
